EXPERIENCE

JPMorgan and Chase Co.

Associate Software Engineer (Software Engineer II)

Analyst Software Engineer (Software Engineer I)

New York City

Feb 2024 - Present

Oct 2022 - Feb 2024

- Architected and operated containerized microservices on Kubernetes (AWS EKS) for Business Intelligence platforms for stakeholders. implementing autoscaling (HPA), rolling deployments, lightswitches, and fault-tolerant service patterns to support high-availability financial workloads reducing technical debt and cloud infrastructure costs by ~36% through workload optimization, resource right-sizing, and migration of legacy services off on-prem infrastructure equating to tens of thousands in monthly savings.
- Co-led cross-functional system design efforts across 5+ engineering teams, defining API contracts, event schemas, and service ownership boundaries to improve service interoperability, reducing integration defects and accelerating delivery timelines.
- Developed and maintained comprehensive test suites, providing near full test coverage for crucial components with JUnit, Jest, and Cypress automation, ensuring high-quality software delivery.
- Maintained CI/CD pipelines using Jenkins and Docker for microservices deployment, reducing release cycle time by ~60% and standardizing build, test, and deployment workflows across teams. Improved deployment reliability by integrating automated testing gates and environment checks into release pipelines.
- Managed and automated infrastructure provisioning using Terraform for both cloud artifact deployments on EKS and network securities, including IAM roles, encryption, and controlled access patterns, aligning with financial industry compliance standards.
- Designed and maintained high-throughput ETL and streaming pipelines using Kafka, SQS, and S3, processing over 1TB+ of data to support fraud detection, payment processing, and AI-driven decision systems. Enabling near real-time analytics for fraud detection, trading insights, and agentic analytic solutions.
- Collaborated with data science and AI teams to deliver data pipelines and infrastructure supporting machine learning workflows, enabling scalable model training and inference on platforms such as Snowflake and Databricks.
- Built and standardized data contract patterns such as model context protocols for fraud platforms, enabling reliable feature delivery and real-time inference across cloud-based distributed systems while improving cross-team understanding of API contracts and accelerating service integration.

App Academy | Software Engineer & Technical Assistant | NYC

Sep 2021 - Oct 2022

Railcare Health | Software Engineer Intern | North Carolina

Mar 2021 - June 2021

TECHNICAL SKILLS

Programing Languages: Java, Python, Javascript, Ruby, R, SQL, Node.js

Frameworks: Spring Boot, React, Flask, PySpark, Ruby on Rails

Databases: PostgreSQL, Oracle SQL, Aurora PostgreSQL, AWS RDS (Relational Database Servers), MongoDB, SQLite3

Infrastructure (CI/CD): Terraform, Jenkins, Harness, Spinnaker, Docker, Kubernetes

AI/ML Technologies: Ollama, Cline, LLMs, LangChain, RAG, Gen AI, Prompt Engineering

Others Technologies: Redux, HTML, CSS, SCSS, Canvas, AJAX, Object-Oriented Programming, Mongoose, Express.js, AWS S3, AWS Lambda, AWS Glue, Webpack, Git, Heroku, jFrog, Firebase, AWS ECS, AWS EKS

EDUCATION

[University of North Carolina at Chapel Hill](#)

Chapel Hill, NC

Bachelor of Science in Biology | Chemistry + Chinese Minor |

CERTIFICATES

AWS Certified Cloud Practitioner

Jan 2023
